

Monitor charging station / trigger notification

Every charging station on the Eponet portal can be monitored. You can receive a notification when there is a change in status (e.g. when offline).

- Notification of status change

Notification of status change

The status of every charging station connected to Eponet can be monitored. This means that if, for example, a charging station goes offline or reports a fault, an email is sent.

This can be set up under the "Monitoring" tab, which can be found for each charging station:

Tip: Multiple email addresses can be entered, separated by semicolons.

The desired notification can be added using the green "Add" button:
